TABLE OF CONTENTS

RECEIVING THE MACHINE

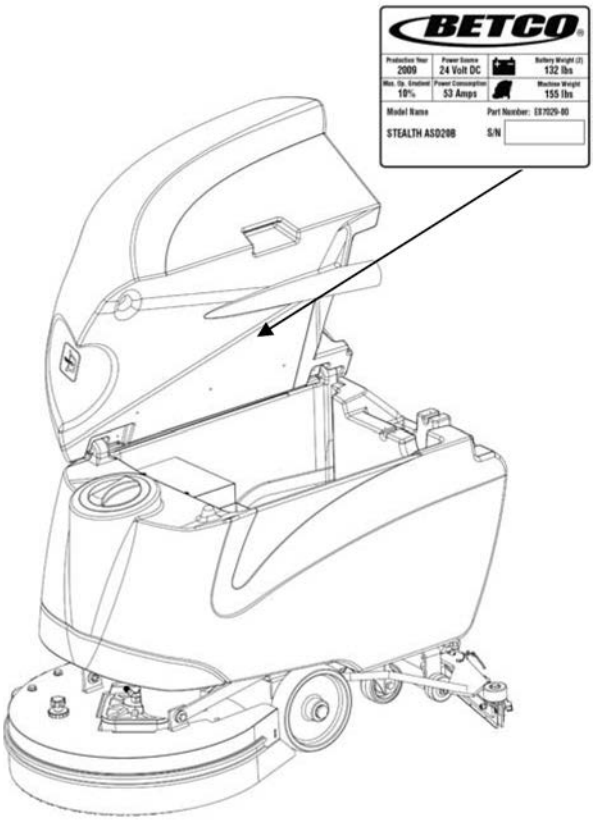
Immediately check, when receiving the machine, that all the materials indicated on delivery documents have been received and also that the machine has not been damaged in transit. If it has been damaged, this damage must be immediately reported to the shipper and also to our customer's service department. Only acting promptly in this manner will make it possible to receive missing material and to be compensated for damage.

INTRODUCTION

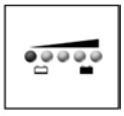
This is an automatic scrubber which, via the mechanical action of the rotating brush and the chemical action of a water/detergent solution, can clean many types of hard flooring. As it advances, it also collects the dirt removed and the detergent solution not absorbed by the floor.

The machine must be used only for this purpose. Even the best machines will only work well if used correctly and kept in good working order. We therefore suggest you read this instruction booklet carefully and re-read it whenever difficulties arise while using the machine. Please contact our technical service department or your dealers if you have any questions about the machine.

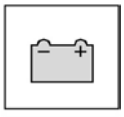
Serial # Plate



SYMBOLS USED ON THE MACHINE



Battery charge gauge



Battery symbol

Open book symbol
Used to tell the operator to read the manual before using the machine

Maximum solution temperature gauge
Located near the solution tank inlet

TECHNICAL DESCRIPTION	Measurement Unit	Stealth™ ASD20B
Rated power	HP (W)	1.3 (950)
Working width	In (mm)	19.7 (500)
Rear squeegee width	In (mm)	29.2 (742)
Work capacity	ft2/h (m2/h)	18,500 (1720)
Water consumption	g/m2	38
Brush & Pad (diameter)	in (mm)	20 (500)
Brush RPM	RPM	140
Brush pressure	lb. (Kg)	51 (23)
Brush motor	V / HP (V / W)	24 / 0.54 (24 / 400)
Drive Type		Semi-Automatic
Vacuum motor	V / HP (V / W)	36 / 0.74 (36 / 550)
Vacuum motor suction	inches of water (mbar)	75.6 (188)
Solution tank capacity	Gal (l)	11 (40)
Recovery tank capacity	Gal (l)	13 (50)
Weight of machine (excluding batteries)	lb. (Kg)	165 (75)
Batteries	V / Ah	12 / 130 (2)
Charger	V / A	24 / 12
Battery compartment dimensions (Length / Height / Width)	in x in x in (mm/mm/mm)	14.2 x 12.8 x 13.0 (360 /325 /330)
Machine dimensions (Length / Height / Width)	in x in x in (mm/mm/mm)	45.3 x 39.4 x 20.9 (1150 / 1000 / 530)
Noise level	dBA	58

GENERAL SAFETY REGULATIONS

The regulations below must be carefully followed in order to avoid harm to the operator and damage to the machine.

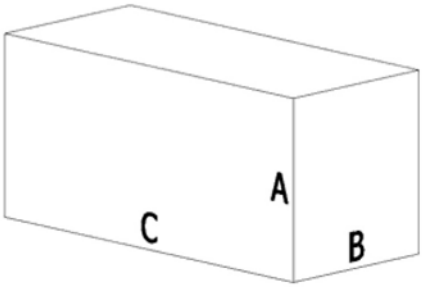
- Read all labels on the machine carefully. Do not cover them for any reason and replace them immediately if they become damaged.
- The machine must be used exclusively by authorized and trained personnel.
- When operating the machine be careful of other people.
- The machine is not designed for cleaning carpets.
- The power cable outlet must be provided with a proper ground.
- Avoid damaging the power cable of the battery charger by crushing, bending, cutting or stressing it.
- Whenever the power cable of the battery charger is damaged, immediately contact a BETCO service center.
- Do not mix different types of detergent as this may produce harmful gases.
- Do not set containers on the machine.
- Machine storage temperature is between -10°F and 130°F, never store outside under humid conditions.
- Operating conditions: room temperature between 33°F and 100°F with relative humidity between 30% to 95%.
- Only use the machine in closed areas and do not expose it directly to rain.
- Never use the machine in an explosive environment.
- Do not use the machine as a means of transport.
- Never use acidic chemicals which could damage the machine.
- Avoid running the brushes with the machine stopped; this could damage the floor.
- Never vacuum up flammable liquids.
- Never use the machine to gather dangerous powders.
- Use a powder fire extinguisher in case of fire. Do not use water.
- Do not hit against shelving or scaffolding. The operator must always be equipped with the appropriate safety device (gloves, shoes, helmet, glasses, etc.)
- Do not use the machine on surfaces with an inclination greater than the one shown on the serial plate.
- The machine is designed to wash and dry floors simultaneously. Signal the presence of wet floors with suitable signs.
- If the machine does not work properly, perform routine maintenance. Otherwise, request the assistance of the BETCO technical service.
- When replacing parts ask for ORIGINAL spare parts from your Authorized BETCO Dealer and/or Retailer.
- Always turn off the machine and disconnect the battery connector whenever maintenance is performed.
- Never remove guards that require tools for removal.
- **Never wash the machine with direct or pressurized jets of water or with corrosive substances.**
- Have your BETCO service center check the machine once a year.
- To prevent the formation of scale in the solution tank filter, do not store the machine with detergent solution in the tanks.
- Before using the machine make sure that all doors and covers are positioned as shown in this operating and maintenance manual.
- When your BETCO machine is ready to be retired, the machine must be disposed of properly. It contain oils and electronic components. The machine was built using totally recyclable materials.
- Use only brushes furnished with the machine or those specified in the user's manual. Use of other brushes can compromise safety.
- When removing the battery, unplug the battery connection, unplug the charger and disconnect the battery terminals.
- Before recycling the machine, remove the battery.

MACHINE PREPARATION

1. HANDLING THE PACKED MACHINE

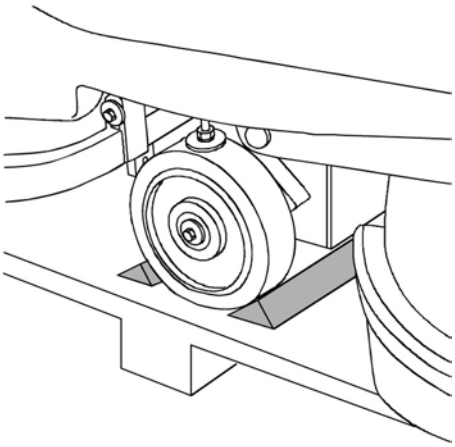
Do not place more than two packages on top of each other.
The total weight is 220 lb. (100 kg).
The overall dimensions of the package are:

A : 45.1 in (1145 mm)
B : 26.2 in (665 mm)
C : 48.4 in (1230 mm)

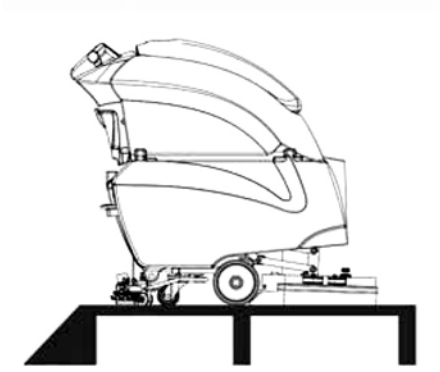


2. HOW TO UNPACK THE MACHINE

A. Remove the outer packaging.
B. The machine is placed on the pallet with wedges which block the wheels.
C. Remove these wedges.



D. Use a ramp to get the machine down from the pallet, pulling it backwards.
E. Keep the pallet for any future transport needs.



MACHINE PREPARATION

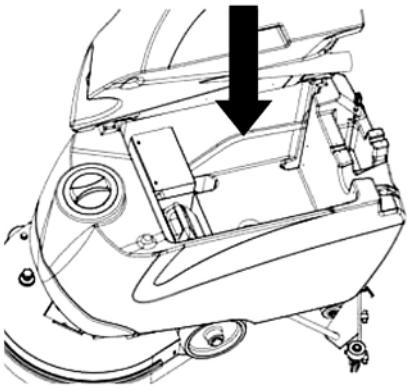
3. BATTERY INSTALLATION

The machine will be supplied with a battery charger and either two 12V Wet or AGM batteries. The batteries must be housed in the battery tray in the battery compartment beneath the recovery tank.
To insert the batteries you must:
A. Lower the squeegee and brush deck.
B. Open the rear latch **(2)** that secures the tank.
C. Rotate the recovery tank as far as it will go, using the side handle **(3)**.

WARNING: To avoid acid spillage you can use sealed batteries.

WARNING: Perform one battery charging cycle before using the machine.

4. TYPE OF BATTERY

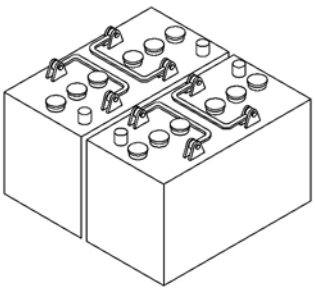


To power the machine you can use:
- Wet batteries
- AGM batteries
- Gel batteries

OTHER TYPES MUST NOT BE USED.

The maximum battery dimensions and the weight are:
Width 6.7 in (171 mm)
Length 12.9 in (329 mm)
Height 9.6 in (245 mm)
Weight 68 lb. (31 kg)

WARNING: Your charger and battery check card must be set according to the type of battery you install. Call BETCO customer service to ensure correct charger setting after replacement batteries are installed.



- The batteries must be handled using lifting and transportation means suitable for the weight and dimensions.
- They must be connected together in series, to obtain an overall voltage of 24V on the lugs.
- The electrical connection operations must be carried out by certified trained personnel.

MACHINE PREPARATION

5. BATTERY MAINTENANCE

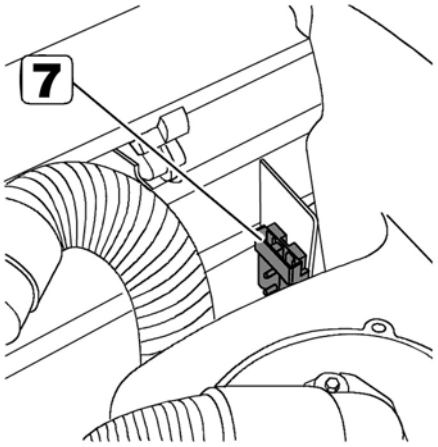
For maintenance and recharging, follow the instructions provided by the battery manufacturer.

6. BATTERY DISPOSAL

When the battery reaches the end of its working life, it must be disconnected by a certified professional, then lifted (using the handles and suitable lifting device) to remove it from the battery compartment.
USED BATTERIES ARE CLASSIFIED AS HAZARDOUS WASTE AND MUST BE DISPOSED OF AT AUTHORIZED BATTERY DISPOSAL SITE.

7. CONNECTING THE BATTERY CHARGER

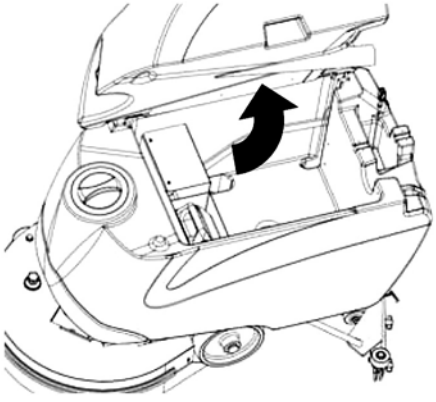
Beneath the recovery tank there is the battery connector (**7**). The battery charger connector must be plugged into the battery plug.



WARNING: This process must be carried out by qualified personnel. The incorrect connection of the cables to the connector can seriously harm people and damage objects.

8. RECHARGING THE BATTERIES

Perform one complete battery charge cycle before using the machine.
Avoid totally discharging the batteries! This can cause permanent damage.
Recharge as soon as the battery discharged signal light starts to flash.



WARNING: Never leave the batteries completely discharged, not even if the machine is not being used. This can cause permanent damage to them. While recharging, keep the recovery tank raised. Ensure the battery charger is suitable for the batteries installed.

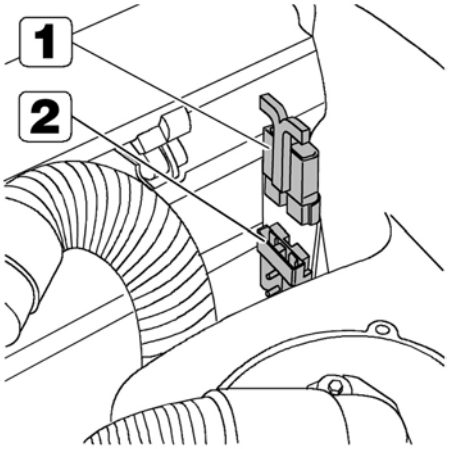
Danger of inhalation of gas and leakage of corrosive liquids.

Danger of fire: do not go near flames.

MACHINE PREPARATION

9. CONNECTING THE BATTERY CONNECTOR

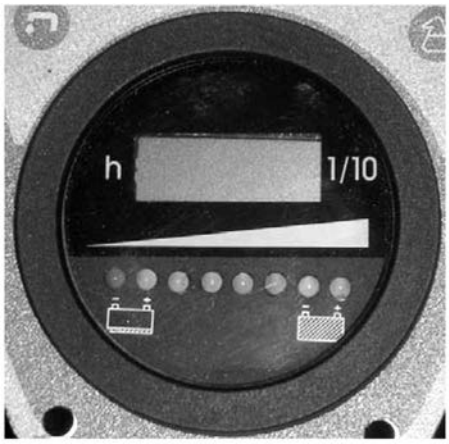
Connect the battery connector (**2**) to the machine connector (**1**)



10. BATTERY INDICATOR

The battery indicator uses LEDs and has 8 positions (7 yellow - charged batteries, and 1 red - discharged batteries).

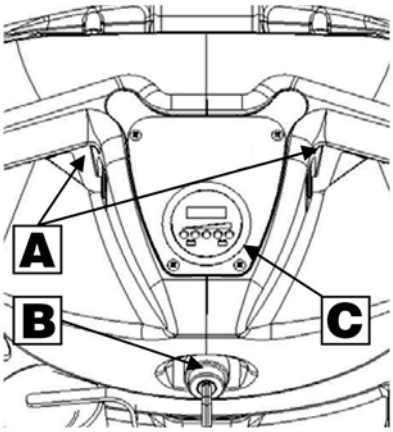
WARNING: A few seconds after the red indicator light comes on, the brush motor switches off automatically. With the remaining charge it is possible to complete the drying process before recharging.



MACHINE PREPARATION

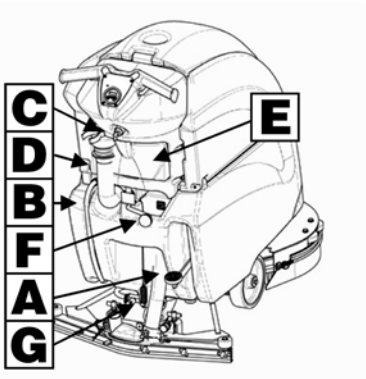
11. INSTRUMENT PANEL COMPONENTS

The instrument panel components are identified as follows:
A. Levers to activate brushes / traction (located beneath the grip)
B. ON/OFF key switch
C. Battery level / hour meter



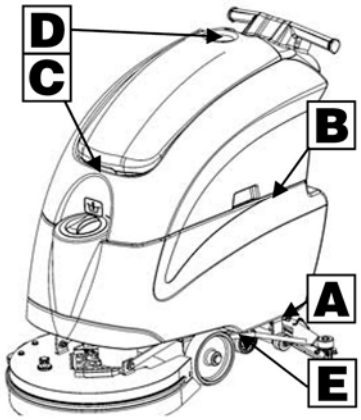
12. REAR COMPONENTS

The rear components are identified as follows:
A. Foot pedal to raise the brush deck
B. Water / solution level hose
C. Drain hose with recovery tank cap
D. Latch to close the tanks
E. Storage compartment
F. Lever to raise the squeegee
G. Solution filter



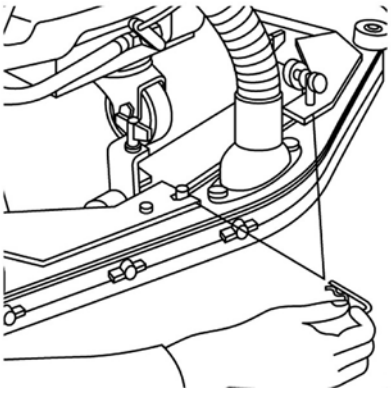
13. SIDE COMPONENTS

The side components are identified as follows:
A. Valve for manual regulation of clean water outlet
B. Handle to raise the recovery tank
C. Handle to raise the vacuum unit
D. Upper storage compartment
E. Brake lever



14. ASSEMBLING THE SQUEEGEE

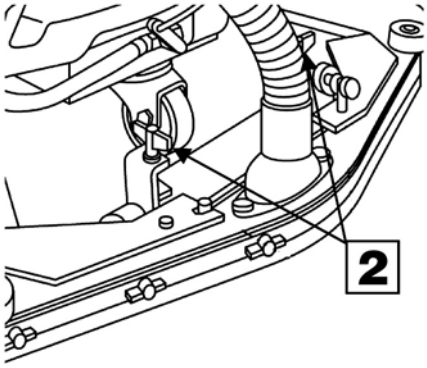
For packaging reasons, the squeegee is supplied dismounted from the machine, and must be assembled as follows:
A. Insert the two small pins of the squeegee in the appropriate holes on the squeegee support;
B. Insert the two cotter pins chained to the squeegee;
C. Plug the squeegee hose into the squeegee shoe adaptor.



MACHINE PREPARATION

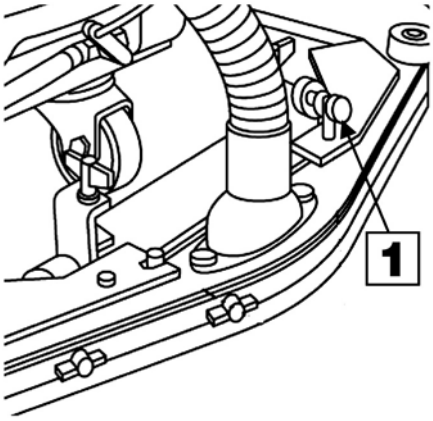
15. ADJUSTING THE SQUEEGEE HEIGHT

The height of the squeegee must be adjusted based on wear of the squeegee blade. To do this, turn the knobs (**2**) counter clockwise to raise the squeegee, and clockwise to lower it.
Note: the right and left wheels must be adjusted to the same level, so the squeegee works parallel to the floor.



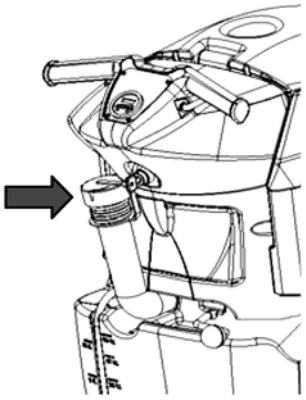
16. ADJUSTING THE SQUEEGEE INCLINATION

During working operation, the rear squeegee blade is slightly bent backwards (by about 0.2 in (5 mm)) in a uniform manner for its entire length. If it is necessary to increase the bend of the squeegee blade in the central region, you must tilt the squeegee backwards, rotating the adjuster (**1**) counter clockwise. To increase the bend of the squeegee blade at the sides of the squeegee, rotate the adjuster clockwise. When fully adjusted, tighten the jam nut.



17. RECOVERY TANK

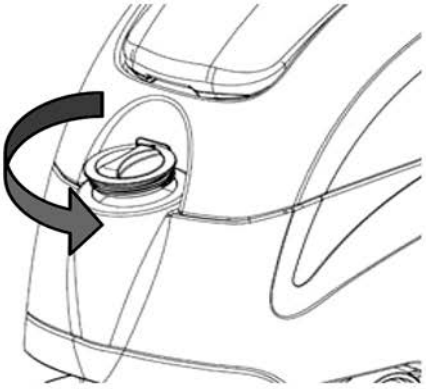
Check the drain hose cap (on the rear of the machine) to ensure it's closed.



MACHINE PREPARATION

18. SOLUTION TANK

Remove the front inlet cap and confirm the solution filter is correctly installed. Confirm the filter cap (beneath the solution tank, at the back) is correctly closed.

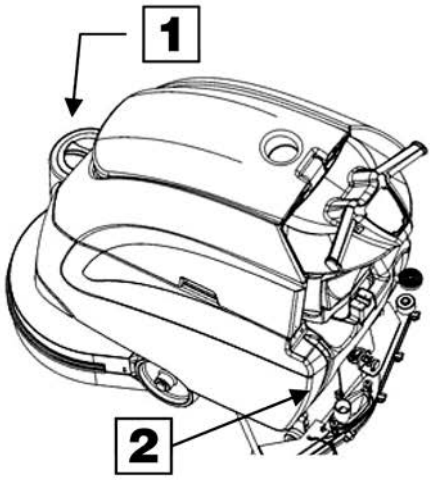


19. SOLUTION TANK

Fill the tank with clean, room temperature water through the front fill location (**1**). Water temperature not to exceed 120°F (50°C). You can check the level of solution in the tank by reviewing fluid level in the sight tube (**2**).
Add the liquid detergent into the tank, in the concentration and manner specified by the manufacturer. The formation of excess foam could damage the vacuum motor, so be sure to use the correct concentration of detergent.

WARNING: Always use low-foam detergent. Introduce a small amount of defoaming chemical in the recovery tank before starting to work to prevent foam from being generated.

WARNING: Never use acids.

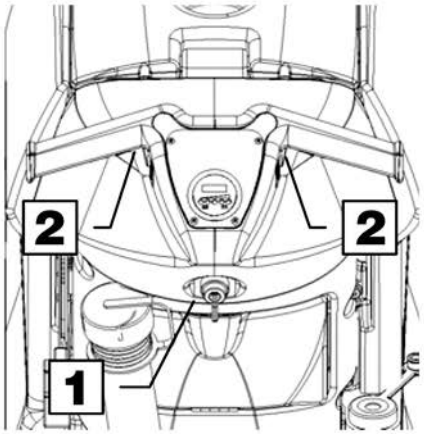


20. MOUNTING THE BRUSH

A. With the brush deck up, place the brush under the brush deck and position it in line with the clutch plate beneath the brush deck.
B. Lower the brush deck, turn the key (**1**) to position “1”, pull the levers (**2**) on the handlebars.

The brush will automatically attach to the drive under the brush deck.

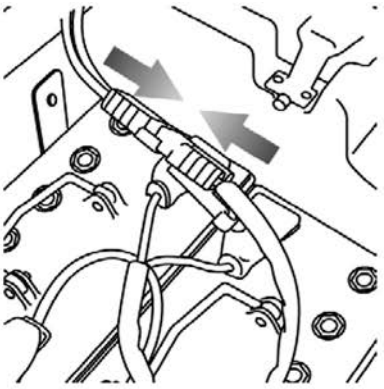
WARNING: Make sure there are no objects or people in the vicinity of the brush when doing this operation.



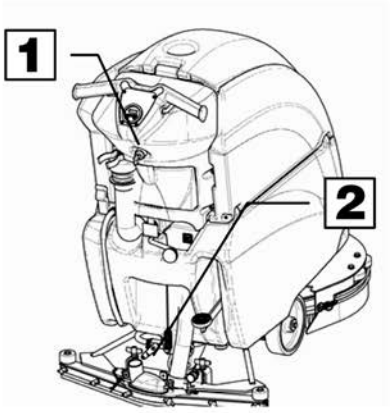
OPERATION

1. MACHINE OPERATION

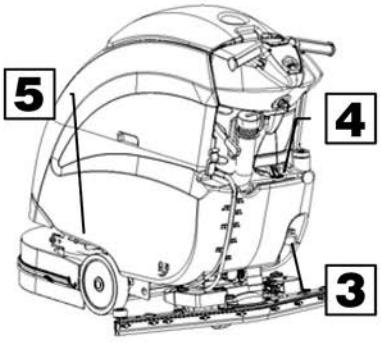
A. Connect the battery plug to the machine plug.



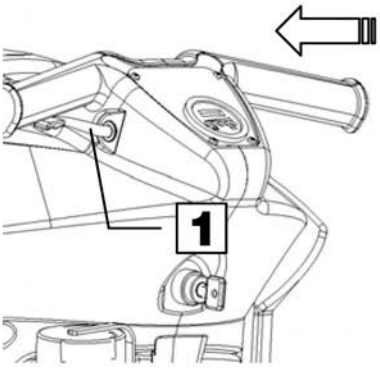
B. Turn the key (**1**) of the main switch to the "ON" position (clockwise). The battery charge level indicator lights will immediately turn on.
C. Turn on the water valve (**2**) (the water dispenses automatically when the brush is turning).



D. Release the lever (**3**) and lower the brush deck.
E. Lower the squeegee, by rotating the squeegee lift lever (**4**) counter clockwise. The vacuum motor will turn on.
F. Confirm that the brake (**5**) is released.



G. Pressing the levers (**1**), activates the brushes and the machine begins to move itself forward. During the first few feet, adjust the amount of solution dispensed, and confirm that the squeegee dries the floor.
H. The machine will now start to scrub and dry until the solution tank is empty or recovery tank is full.

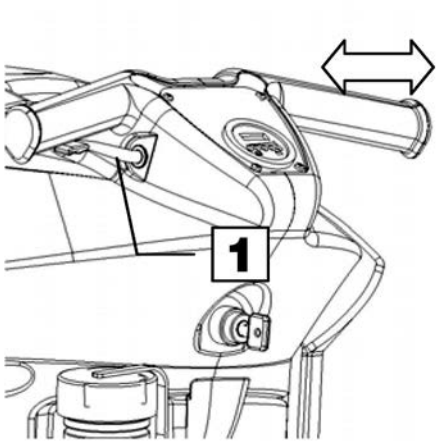


OPERATION

2. FORWARD MOVEMENTS

The traction of these machines is obtained by means of the pad which, working slightly inclined, is able to pull the machine forward. To move the machine, activate the switch levers (**1**) on the handlebars.

WARNING: When moving in reverse lift the squeegee.

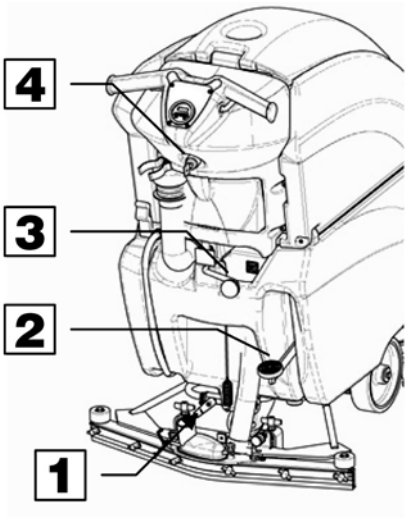


3. OVERFLOW DEVICE

The machine has a shut off float in a filter basket that activates when the recovery tank is full and stops airflow into the vacuum hose.
At this point you must empty the recovery tank by removing the cap of the drain hose.

WARNING: Always wear gloves when doing this operation to protect you from contact with hazardous chemicals.

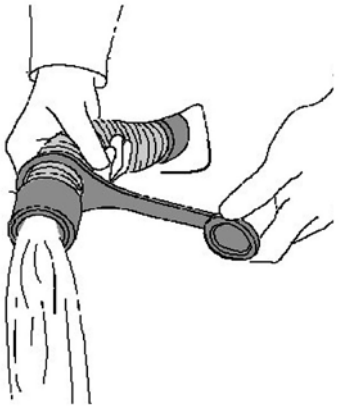
SHUTTING DOWN THE MACHINE



1. AFTER FINISHED CLEANING

Do the following when shutting down the machine and before you perform any type of maintenance:

A. Turn off the solution valve using the knob (**1**)
B. Raise the brush deck using the foot pedal (**2**)
C. Raise the squeegee using the squeegee lift lever (**3**)
D. Turn off the key switch (**4**)
E. Move the machine where the tanks can be drained.



F. Remove the drain hose from its holder, unscrew the drain cap and empty the recovery tank.
G. The squeegee must be raised when the machine is not operating, to avoid deforming the squeegee blades.
H. Remove the floor scrub pad and clean it with water.

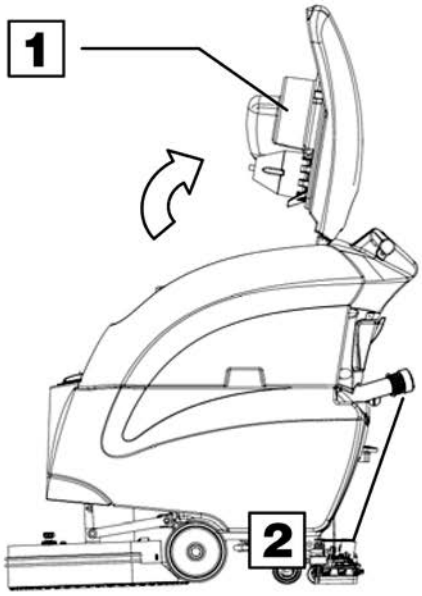
WARNING: Always wear gloves when doing this operation to protect you from contact with hazardous chemicals.

DAILY MAINTENANCE

1. CLEANING THE RECOVERY TANK

A. Raise the vacuum cover (**1**).
B. Remove the drain hose (**2**) from its holder and empty the tank.
C. Rinse the inside of the tank with water.
D. Close the recover tank cover on the machine and replace the drain hose cap and drain hose.

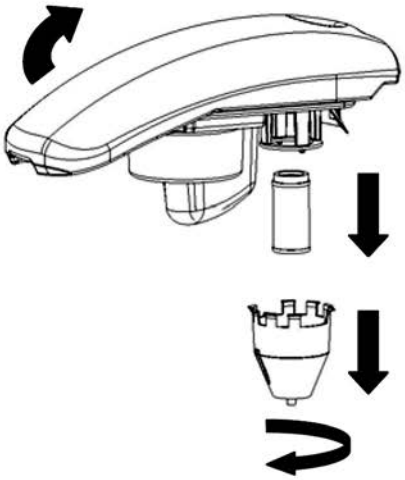
WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.



2. CLEANING THE VACUUM FILTER

A. Raise the recover tank cover.
B. Remove the vacuum filter cover by rotating it clockwise.
C. Pull the filter to remove it.
D. Use water to clean the filter.
E. Perform the cleaning operations with care.
F. Reassemble all the components.

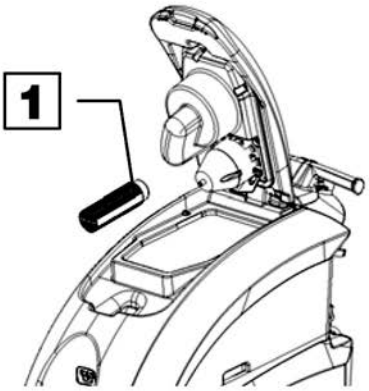
WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.



3. CLEANING THE VACUUM HOSE FILTER

A. Raise the recover tank cover.
B. Rotate the inner filter (**1**) and remove it.
C. Use water to clean the filter.
D. Perform the cleaning operations with care.
E. Reassemble all the components.

WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.

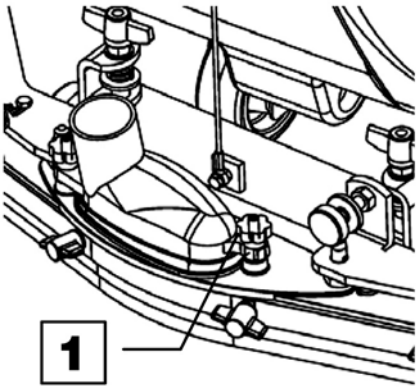


DAILY MAINTENANCE

4. CLEANING THE SQUEEGEE

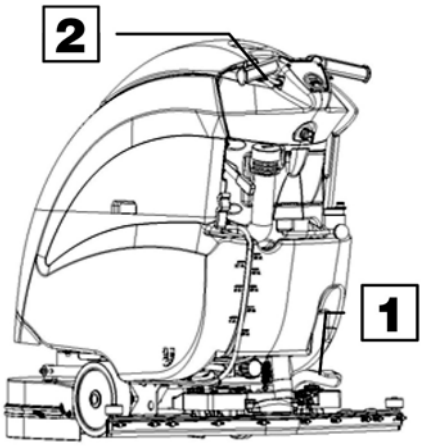
For the best floor drying performance keep the squeegee clean.

To clean it:
A. Remove the vacuum hose from the squeegee.
B. Loosen the knobs (**1**) that hold the squeegee shoe adapter.
C. Remove and clean the squeegee shoe adapter.
D. Carefully clean inside the squeegee.
E. Carefully clean the squeegee blades.
F. Reassemble all the squeegee components.



5. REMOVING THE PAD

To remove the pad driver:
A. Turn on the machine with the key switch.
B. Press the foot pedal that raises and lowers the brush deck (**1**), and slightly raise the floor pad off the floor.
C. Pull the switch levers (**2**) and quickly release them.
D. The pad driver will be automatically release from the brush deck.

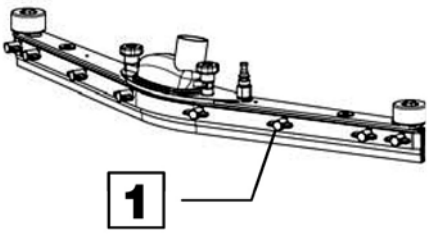


6. REPLACING THE SQUEEGEE BLADES

Check the condition of the squeegee blades and, if necessary, replace them.

To replace them:
A. Remove the squeegee vacuum hose from the squeegee shoe adapter.
B. Remove the cotter pins that pass through the mounting pins of the squeegee shoe.
C. Remove the squeegee shoe from the squeegee yoke.
D. Loosen the knobs two complete turns (**1**).
E. Remove the squeegee band clamp and squeegee blade.
F. Replace the squeegee blades.

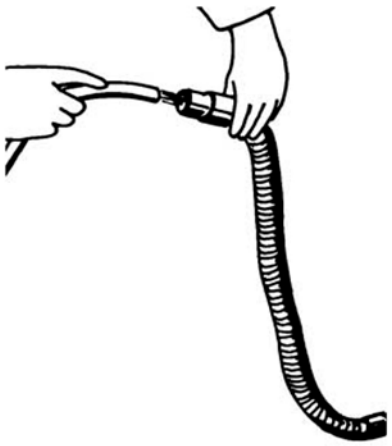
To reassemble the squeegee, repeat the above-mentioned operations in the reverse order.



WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.

WEEKLY MAINTENANCE

1. CLEANING THE SQUEEGEE HOSE

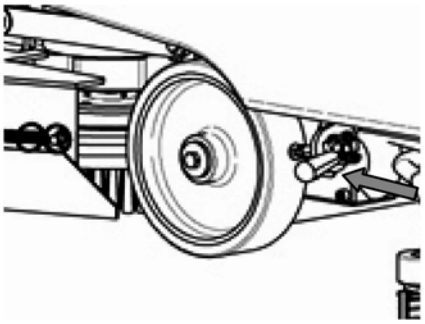


Every week, or whenever vacuum seems to be unsatisfactory, check the squeegee hose for obstructions. To clean it, proceed as follows:

A. Remove the hose from the sleeve on the squeegee.
B. Remove the other end from the recovery tank.
C. Wash the inside of the hose with water introduced from the side where it is connected to the tank.
D. Reassemble the hose.

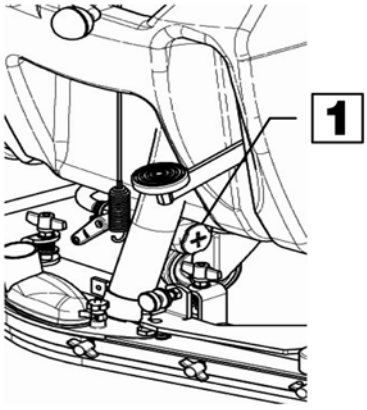
WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.

2. CHECKING THE BRAKE



Every week, check the distance between the work brake pads and the wheels. If necessary, adjust them by means of the nuts, so they are at a distance of 0.12 in (3 mm) when released.

3. CLEANING THE SOLUTION TANK



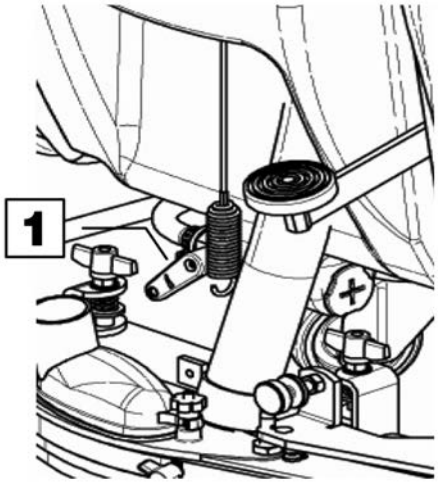
A. Loosen the solution tank cap.
B. Rinse with water.
C. Loosen the drain cap (**1**) located on the filter, and empty the tank.

WARNING: Always wear gloves when doing this operation to protect yourself from contact with hazardous chemicals.

TROUBLESHOOTING GUIDE

INSUFFICIENT WATER ON THE PAD

1. Check the valve – located beneath the symbol – (**1**) is turned on.
2. Confirm that there is water in the solution tank.



THE MACHINE DOES NOT CLEAN WELL

1. Check the condition of the pad and, if necessary, replace it.
2. For cleaning floors where the dirt is particularly resistant, we recommend the use of special brushes supplied upon request and according to needs.

THE SQUEEGEE DOES NOT DRY EFFECTIVELY

1. Confirm that the squeegee blades are clean.
2. Adjust the inclination of the squeegee.
3. Ensure the vacuum hose is correctly inserted in its housing on the recovery tank.
4. Check the inner filter of the recovery tank to ensure it is not dirty and, if necessary, clean it thoroughly.
5. Disassemble the entire vacuum unit and clean it.
6. Replace the squeegee blades, if worn.
7. Ensure the vacuum motor switch is turned on.
8. Check squeegee wheel adjustment.

TOO MUCH FOAM IS GENERATED

Check that low-foam detergent is being used. If necessary add a small amount of defoaming liquid to the recovery tank. Remember that more foam is generated when the floors are not very dirty. Dilute the detergent more when cleaning floors that are not very dirty.

CHOOSING AND USING THE BRUSHES

POLYPROPYLENE BRUSH (PPL)

Used on all types of floors. Good resistance to wear and tear, and hot water (no greater than 140°F (60°C)).

NYLON BRUSH

Used on all types of floors. Excellent resistance to wear and tear and hot water (even over 140°F (60°C)).

ABRASIVE BRUSH

The bristles of this type of brush are coated with highly aggressive abrasives. It is used to clean very dirty floors.

THICKNESS OF THE BRISTLES

Thicker bristles are more rigid and are therefore used on smooth floors or floors with small joints. On uneven floors or those with deep joints, it is advisable to use softer bristles which can enter the gaps easier. Remember that when the bristles are worn and too short, they will become rigid and are no longer able to penetrate and clean deep down. In this case the brush tends to jump.

PAD DRIVER

The pad holder is recommended for cleaning smooth surfaces. There are two types of pad holder:

1. The traditional pad holder is fitted with a series of anchor points that allow the abrasive floor pad to be held and dragged while working.
2. The CENTER LOCK type pad holder not only has anchor points, but also a snap-type central locking system made of plastic that allows the abrasive floor pad to be perfectly centered and held without any risk of it becoming detached.

ELECTRICAL DIAGRAM

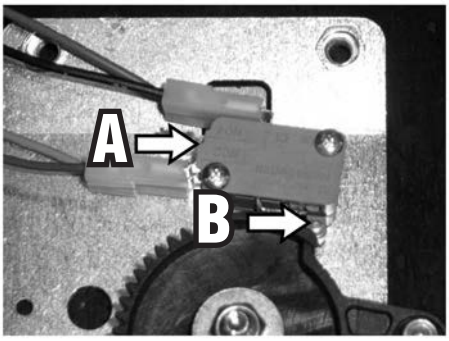
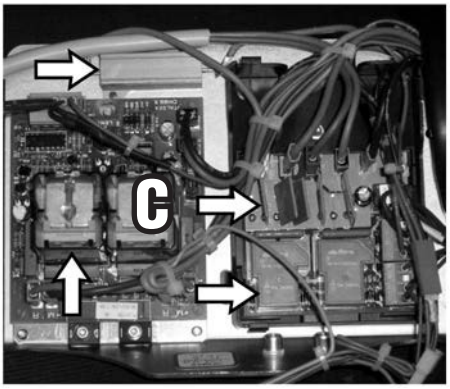
ELECTRICAL SYSTEM

1. ELECTRIC HARNESS INSPECTION

A. Verify the functionality and adjustment of the micro switches of the switch levers.
B. Verify that the micro switches are pressed with the lever in rest position and that in that condition the micro switch lever has about 0.5 mm of movement.
C. Verify the functionality and conditions of the power contactors of the self recovery fuses.





BATTERY CHECK CARD – HOUR METER

1. Verify that when turning on the machine, the battery check card has the following starting sequence:
   - Turning on of the LED which correspond to the set-up (red LED = “0”).
   - Turning on of all the LEDs (check of the lamps)
   - Turning on of the LEDs depending on the charge of the battery
2. Verify the hour meter functionality
   - To verify which is the set-up you simply need to turn on the machine and check which is the first LED that turns on. Counting the LEDs since the left side any LED correspond to a position and the LED which turn on correspond to the current set-up.

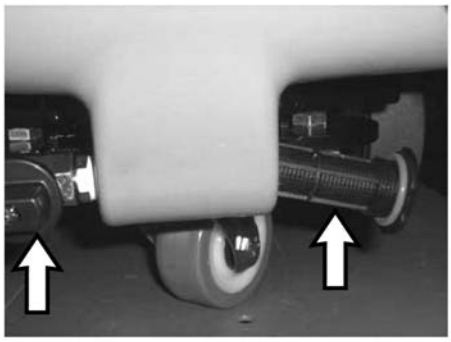
   - Verify that if the machine uses wet cell batteries the adjustment is on position 1.

   - Verify that if the machine uses GEL batteries the adjustment is on position 4.

WARNING: A wrong set-up of the battery control card can compromise the battery efficiency and damage then in irreversible way.

HYDRAULIC PLANT INSPECTIONS

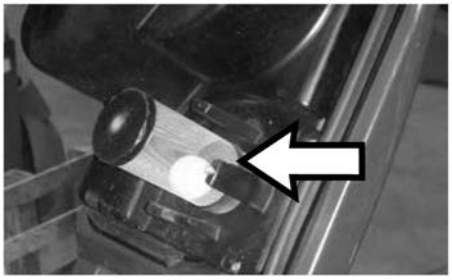
1. Fill up the solution tank and look for leaks around the **solution valve** and the **drain plug**.
2. Verify that the water distribution on the floor is even and dependent on the solution valve adjustment.
3. Check the internal cleanness of the water valve.



4. Verify the cleanness and functionality of the **solution filter** under the solution tank cap.

VACUUM SYSTEM INSPECTION

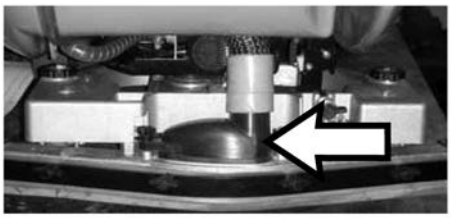
1. Verify the cleanliness and functionality of the **float filter**.



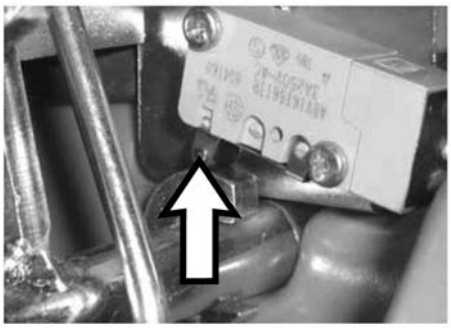
2. Check the air sealing of the **vacuum head** on the recovery tank.

3. Verify the connections and the sealing of the vacuum hoses and the squeegee hoses.

4. Check the sealing of the **squeegee hose adapter**.

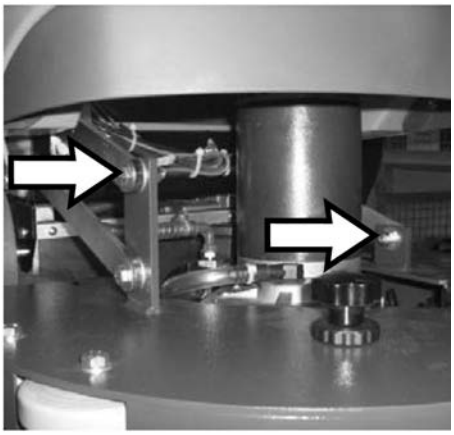


5. Check the sealing of the exhaust hose and exhaust hose plug.



6. Vacuum micro switch adjustment:
   Adjust the vacuum micro switch in way that when the cam on the squeegee lever **push the micro switch** there is about 0.5 mm of clearance of the micro switch lever.

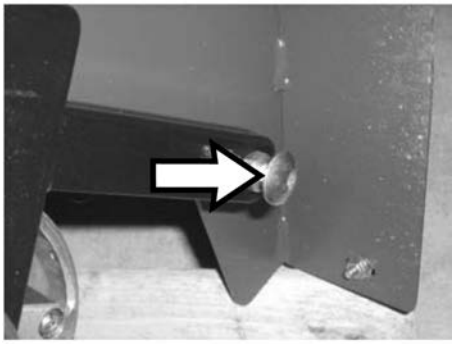
BRUSH BASE ADJUSTMENT



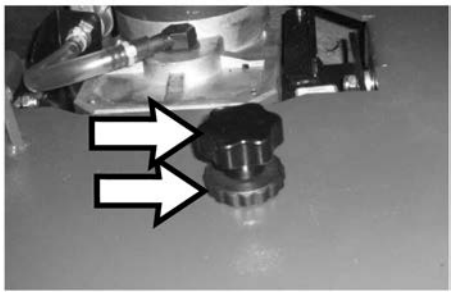
1. Verify the right inclination of the brush deck.

To adjust the brush deck:

A. Lower the brush deck on the floor with the brush.
B. **Loosen the M8 bolt and the M8 nut** that attach the brush deck to the left arm.
C. **Loosen the nut and the bolt** that attach the brush deck to the idler arm.
D. Verify that the brush deck correctly lays on the floor and the brush touch completely the floor.
E. **Tighten the nut and its M8 bolt** to lock the left arm of the brush deck.
F. Lift up the front side of the brush deck to let it be 5 mm from the floor as regards the back side.
G. **Tighten the M8 nut** to secure the brush deck in this position.



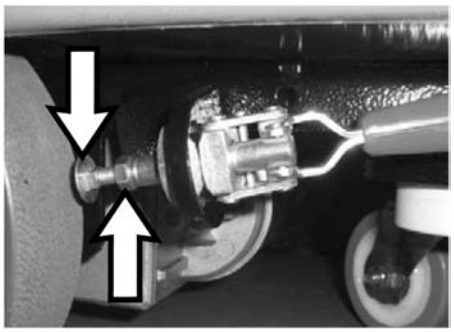
H. Check that the **pan head screw** on the back side is adjusted near the flat part of the brush. The distance between the screw head and the brush has to be 1 - 2 mm when the brush is locked and the brush deck is lowered.



2. In the machines without traction:

A. Loose the **ring nut**.
B. Adjust the **knob** to let the brush in working condition help the machine in going forward. (**Tighten** to increase the traction effect, **loosen** to decrease the traction effect).
C. When the right adjustment is reached, tighten the **ring nut**.

BRAKE ADJUSTMENT

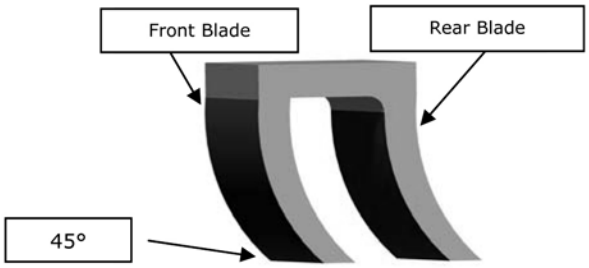


1. Verify that the brake on the left hand wheel blocks the wheel when activated.
2. Otherwise act as follow:

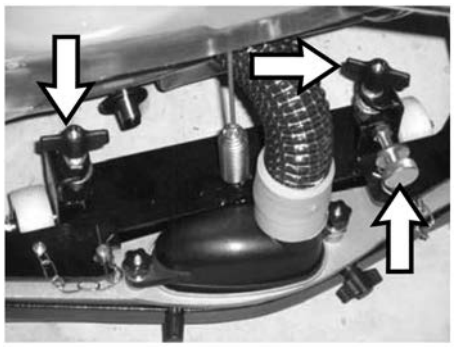
A. Unscrew the **jam nut.**
B. Loosen the **pad screw** to achieve the right adjustment.
C. Verify the adjustment with a functional test.
D. Tighten the **jam nut** to assure a right adjustment.

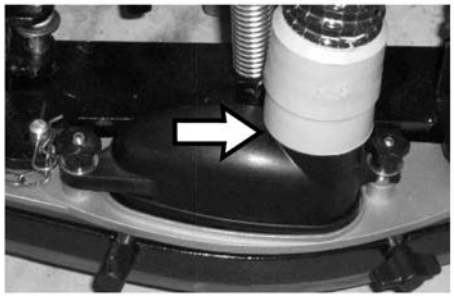
SQUEEGEE ADJUSTMENT

1. Adjust the inclination adjuster of the squeegee blade until the blade has a common inclination over it's entire length.
2. Adjust the height of the wheels using the knob checking that the blade has an inclination between 30 and 45 degrees.



3. Verify the cleanliness and sealing of the squeegee hose adapter.





CHECK LIST

Functional check of the machine

- ☐ Check the functionality of switches.
- ☐ Check the functionality of the accelerator lever.
- ☐ Check the functionality of the brush deck.
- ☐ Check the functionality of the brush motor.
- ☐ Check the functionality of the solenoid valve.
- ☐ Check the functionality of the vacuum motor.
- ☐ Check the functionality of the brakes.
- ☐ Check the functionality of batteries and power cables.

Functional test of the machine

- ☐ Fill up the tanks completely and verify the sealing.
- ☐ Verify the sealing of all the water plant and that the water is equal on the brush.
- ☐ Adjust the inclination and the height of the squeegee blades doing a functional test.
- ☐ Adjust the inclination of the brush deck and do a functional test.
- ☐ Check the efficiency of the parking brake.

Final test

- ☐ Check all the functions: washing, drying and movement.

MAINTENANCE SCHEDULE

	Stealth ASD20B		RECOMMENDED SERVICE INTERVALS (HOURS)				
		DAILY	50	100	200	400	1,000
BATTERIES	Check water level add if necessary	DAILY					
	Check cables, connections and plugs		50				~~1,000~~
	Check cleanless of machine battery tray				200		
ELECTRIC	Check tightness of electric contacts and fuses		50				
	Check state of electric cables crossing the machine					400	
SOLUTION TANK	Check cleanless of solution filter	DAILY				~~400~~	
	Check water valves and hoses to the brush head		50				
	Check all water connection from the tank to the brushes				200		
RECOVERY TANK	Check cleanless of the tank	DAILY					
	Check filter and float system	DAILY					
	Check vacuum and drain hoses	DAILY					~~1,000~~
	Check vacuum gasket and drain hoses plugs			100			
BRUSH HEAD	Check spraying guard and right brush inclination		50			~~400~~	
	Check state of bearings					400	~~1,000~~
	Check brush attachments				200		
	Check wear of rotating brushes		50		~~200~~		
BRUSH MOTOR	Check cleanless of air cooling inlet			100			
	Check carbon brushes					400	~~1,000~~
	Check amp draw and noise level						1,000
VACUUM MOTOR	Check noise level and cleanless of the inlet hose		50				
	Check carbon brushes				200	~~400~~	
	Check vacuum performance, replace if necessary						~~1,000~~
SQUEEGEE	Check cleanless of the squeegee blades and shoe	DAILY					
	Check wear of rear squeegee blade		50	~~100~~			
	Check wear of front squeegee blade			100	~~200~~		
	Check squeege structure and machine support			100			
	Check lever and lifting cable					400	

Suggested replacement ~~X~~

BETCO US WARRANTY POLICY

10 year coverage

Subject to the conditions stated below, Betco warrants parts and labor on rotationally molded polyethylene tanks/housings and injection molded vacuum head assemblies to be free from defects in materials and workmanship for a period of ten years to the original purchaser.

3 Year Coverage

Subject to the conditions stated below, Betco warrants parts and labor on all other Betco components to be free from defects in materials and workmanship for a period of three years to the original purchaser.

1 Year Coverage

Subject to the conditions stated below, Betco offers a limited warranty on parts and labor on the following equipment: parts and accessories to be free from defects in materials and workmanship for a period of one year to the original purchaser.

- HF14 Upright Vacuum: #E88820-00
- Bac Pac Lite Vacuum: #85903-00
- FiberPRO® Floor Dryer: #85507-00
- WORKMAN™ Series Vacuums: #85024-00, #85025-00, #83012-00, #85027-00
- CV100T Vacuum: #85023-00
- All Tools and Accessories
- All Battery Chargers
- All Batteries are pro-rated for 1 year

Allowable Travel Time Warranty Reimbursement:
Eligible equipment: All battery and propane powered equipment products. Warranty period: 90 days from date of sale to the original purchaser. A maximum 180 mile round trip at 50 cents per mile will be allowed for warranty consideration.

Propane Machine Warranty:
Kawasaki engines are warranted by Kawasaki for a period of 2 years against manufacturer defects. All other components (except wear items)* are warranted by Betco for a period of 3 years.

***Wear Items exempt from Warranty consideration include but may not be limited to: power cords, transport wheels, vacuum bags, belts, squeegee blades, pad drivers, clutch plates, handle grips, filters, screens, throttle cables, brushes and carbon brushes.**

Subject to the conditions and exceptions stated in this warranty, Betco warrants the Betco products to be free from defects in material and workmanship, under normal use and service, for the periods listed under the warranty policy to the original purchaser. At any time during the warranty period, Betco will furnish replacement parts for the Betco parts to the original purchaser. Such parts will be furnished and charged including transportation costs, to the original owner through any Betco authorized Service Distributor. If the original part is returned within the warranty policy period from date of delivery for inspection by Betco and is found to be defective the owner will be credited for the cost of replacement parts plus shipping and handling. Replacement parts that have become defective through wear or abuse are not included in this warranty.

This warranty does not apply to damage or defect caused by accident, misuse. Negligence, fire, or to any Betco product which has been serviced or repaired by other than an authorized Betco Service Distributor or Betco factory personnel. This warranty is void if products are used for any purpose other than that which was intended. There are no other warranties expressed or implied. In no event shall Betco be liable for incidental or consequential damages or any damage to person or property. (Please note some states do not allow the exclusion or limitations for incidental and consequential damages).
